

## **ATP Reagent SL 11-501-M (MAPR)**

Lyophilised firefly luciferin-luciferase reagent with a stable light emission (decay rate of ATP and light emission around 0.5%/min). The stable emission makes it possible to use simple luminometers not supplied with reagent dispensers. Suitable for measuring mitochondrial ATP production rate (MAPR) down to  $10^{-15}$  mol . Reconstituted in 23-101 Diluent C. Up to 250 assays in 96-well format.
